## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 16-29 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for marking, does not reasonably provide enablement for the many newly features recited, e.g., claim 16, fat volume, claim 17, pH, claim 18, caprine, claim 19, isolated or simultaneous acts, etc. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to configure a marking or engraving apparatus invention commensurate in scope with these claims.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 16-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 16-29 are apparatus claims written using process limitations. The structure of the apparatus is not clearly described with process limitations.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1725

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16-29 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over either of JP358090985A or USPN 5,897,797 to Drouillard et al.

The English language abstract of JP358090985A describes both laser marking apparatus and heated plate marking apparatus. Computer control of a marking process in a manufacturing facility is inherent.

Drouillard et al describe a laser marking device comprising holding means and sensing means and computer control. Drouillard et al describes a heating element such as a laser for cauterizing the produce skin. Drouillard et al describe various marking processes and describes good depth control with the laser marker. The intended use of the device for marking meat does not impart structural patentability to the apparatus claims.

### ***Response to Arguments***

Applicant's arguments filed August 03, 2006 have been fully considered but they are not persuasive. In response to applicant's argument that a meat product is marked, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.
